

## TASK – 3

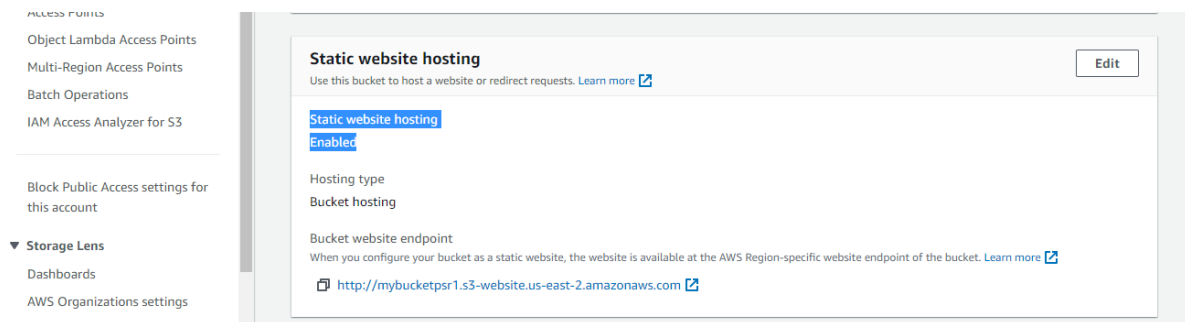

## STATIC WEBSITE HOSTING

### 1) Creating the s3 bucket and hosting a static website

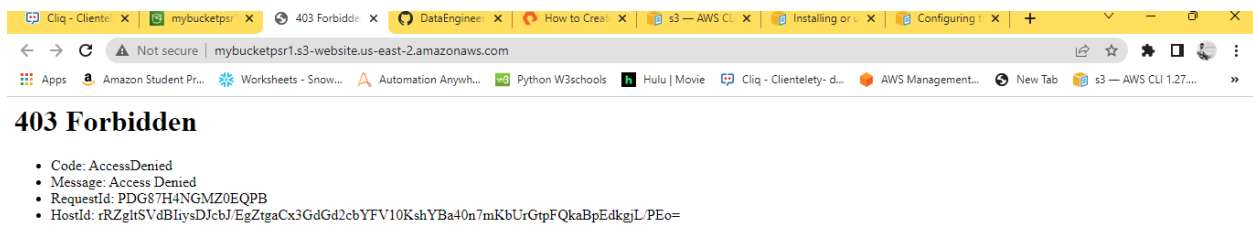

**s3 bucket name : mybucketpsr1**

Static website hosting is enabled:

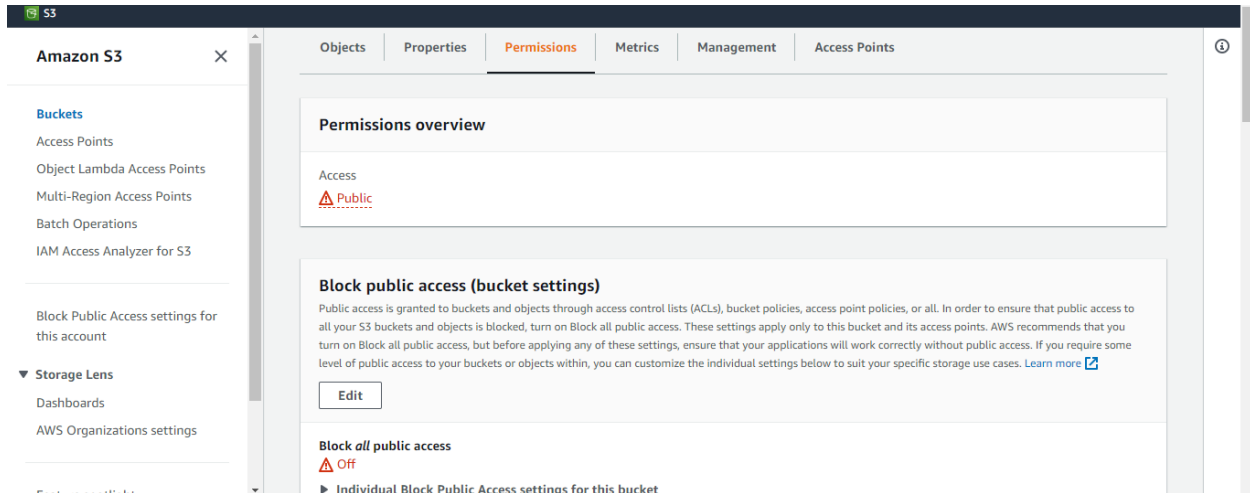

Need to change the permissions as it is giving 404 error

Enabling the public access :

## TASK – 3

## STATIC WEBSITE HOSTING

**Amazon S3**

**Permissions overview**

Access

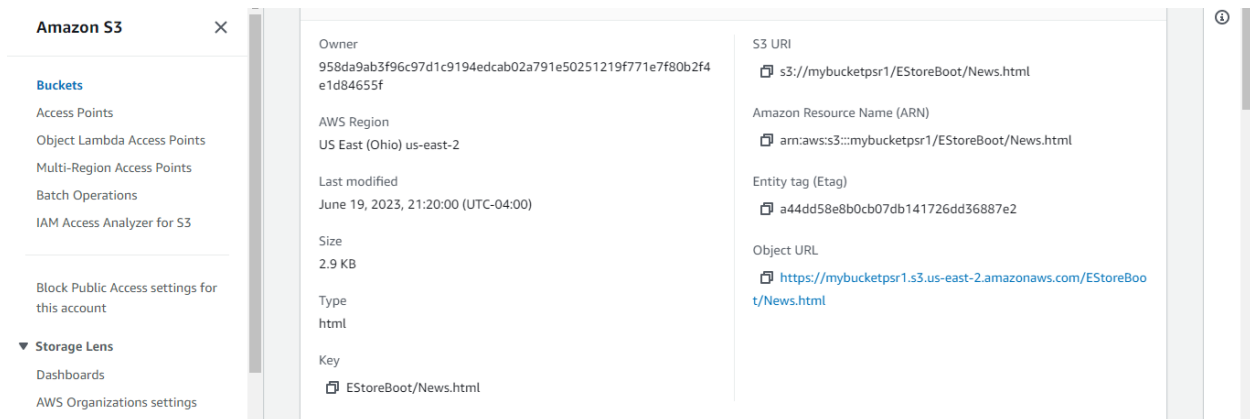

**Block public access (bucket settings)**

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to all your S3 buckets and objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to your buckets or objects within, you can customize the individual settings below to suit your specific storage use cases. [Learn more](#)
